

# Confidence In Accounting Systems at Gemedey Continues to Grow

Founded by Harvard and MIT researchers, Gemedey is a leading provider of intelligent software and systems to the public and private sectors. Named an SBA Emerging Leader, Gemedey serves customers including Fortune 500 companies, government agencies and top universities and laboratories. With a broad array of expertise the company offers Engineering and Advisory services as well as corporate training and events. Among the company's areas of expertise are:

- Applied Perception
- Computational Social Systems
- Human-Computer Interaction
- Knowledge Discovery from Data
- Visualization and Mixed Reality

## Amplify Your Intelligence

Gemedey builds intelligent software and systems to address the most demanding computational, physical, and social challenges of our times. In the words of Alex Wissner-Gross, co-founder of Gemedey, "We build software for artificial intelligence applications for a wide ranging group of applications. We strive to humanize the interaction of various applications for our clients." Alex Wissner-Gross applies science and engineering principles to big (and diverse) questions, like: "What is the equation for intelligence?" and "What's the best way to raise awareness about climate change?" He addresses a new equation for intelligence in his Ted Talk. Join the more than 2 million viewers, found at Ted.com.

Just as Gemedey has developed an equation for intelligence, so too has Kline and Company developed an "equation for intelligence in accounting". Summing up the company's approach to service excellence, Kline and Company President, Fred Kline, says "We have a great team in place that takes a client-centric approach and follows our meticulous process, in which our clients have great confidence. We have implemented a patient and thorough approach."

*A commitment to innovation and critical thinking leads to exceptional levels of excellence at Gemedy*

## Kline and Company Keeps Gemedy Accounting System Compliant And Running Smoothly

### A Member of the Gemedy Team

With a focus on their products, such as Gemedy SKEIN™, and their array of services, the company continues to rely on Kline and Company for peace of mind about the firm’s accounting. There is a level of trust and confidence that enables the team at Gemedy to simply know they are in good hands.

### Peace of Mind

“What we like best about the services from Kline and Company,” continued Dr. Wissner-Gross, “is the structured accounting approach balanced by a flexible, accessible yet forward looking mindset. We are a very innovative company and we often ‘break the mold’ in our line of work.” He went on to say, “Kline and Company takes the time to truly understand our business, our priorities and challenges and they are quite resourceful in their ability to adapt and continually meet our needs. We like the fact we are able to ask questions to the team at Kline.”

### Slow and Steady Wins The Race

The stories of our childhood hold meaning throughout adulthood. Aesop’s Fable of the Tortoise and Hare presents the metaphor that slow and steady wins the race. In Gemedy’s ‘race’ for a solid accounting system, Kline and Company’s Chief Operating Officer, Sheree DeFeo, works closely with Alex and his partner to keep the focus on a deliberate accounting process while also being forward looking in the budgeting for company projects. “It’s all about trust and confidence”, says Sheree, “and the people at Gemedy know they can count on us.”

“ We especially value the fact that Kline and Company is working for our highest and best. We count on them for all of our accounting and bookkeeping needs. My partner and I know with certainty that we can relax with confidence in their work on our company’s behalf.”

Alex Wissner-Gross  
Gemedy, Inc.

Dr. Wissner-Gross

Dr. Alexander D. Wissner-Gross is an award-winning scientist, engineer, entrepreneur, investor, and author. He serves as President and Chief Scientist of Gemedy and holds academic appointments at Harvard and MIT. He has received 125 major distinctions, authored 18 publications, been granted 24 issued, pending, and provisional patents, and founded, managed, and advised 4 technology companies that were acquired for a combined value of over \$600 million. In 2003, he became the last person in MIT history to receive a triple major, with bachelors in Physics, Electrical Science and Engineering, and Mathematics.
